

Data Centre Services

Global Web Services Provider

Design, installation and documentation of a 420 rack data centre cabling infrastructure, comprising 4,000 copper and fibre cabling ends. The same installation team delivered projects across both London and Geneva.

Both projects were successfully delivered on time and to budget under a fixed price contract within a short timescale.

Within a 6 week installation programme, the London project was completed within 5 weeks, while Geneva was completed in just 3 weeks.

“ITM Communications recently completed cabling projects at our London and Geneva data centre facilities. The projects were subject to rigorous and bespoke customer specifications.

I thank them for the professional and efficient manner in which they conducted the installations.”
Hakeem Mabinuori

Client: Global Web Services Provider
System: Systemax
Duration: London 4 weeks and Geneva 3 weeks
Value: £250,000
