

Data Centre Services

Leading Information Management Technology Vendor

As the preferred fibre infrastructure partner, we have worked on a number of this client's end-user client sites over the last four years. In particular and more recently, this has included a multi-site data centre rollout for a defence client.

The project required consistent implementation on a pan European basis, delivered against challenging timescales.

"I have worked with ITM Communications for several years on a number of projects and always find them responsive, competent and trust-worthy. Generally they are good folks to work with." Chris Hardy
